

Possible Activities

For consideration
November 2020

Activity Type 01:

Pop-Up Pump Track

A pop-up Pump Track refers to a modular assembled system of engineered pieces that create unlimited track designs with precise geometry. The pop-up modular Pump track enables riders to gain and maintain speed without pedaling, using pressure to generate momentum. This option would involve a modular off the shelf system that could be installed quickly and also relocated/rotated across many sites if needed.

Examples of pop up pump tracks

Activity Type 02:

Permanent or Semi-permanent BMX/MTB track

This option refers to a dirt track that would be considered semi- permanent for up to 3 years. It would require significant earthworks to create the track, which would need to comply with relevant BMX standards. It would be constructed using specific types of soil to form the track and mounds and would require specialist input to design it to an accredited level.

These installations require a significant maintenance regime for monitoring any modifications made to the track, and repair work required to ensure it continues to comply with relevant BMX codes.

Examples of permanent BMX and Mountain Bike Track

Activity Type 03:

Other Permanent Installations

Other possible recreational options that may provide alternative valuable outlets for young people (and others) in Moonee Valley include bouldering walls and fitness circuits.

These would both be considered permanent as they require greater budget and significant footings and therefore greater consideration for placement on site. The maintenance regime for both is considered moderate, similar to that of any playground, and may benefit others seeking alternative forms of recreation and fitness opportunities.

Example of Bouldering Wall

Example of Ninja Warrior Course
